## Table of Contents

1. Understanding Sleep Science
  2. Sleep Assessment & Baseline
  3. CBT-I: Cognitive Behavioral Therapy for Insomnia
  4. Sleep Diary & Tracking
  5. Sleep Hygiene Protocol
  6. Nutrition, Exercise & Supplements
  7. Progress Review & Adjustment
  8. FAQ & Resources
-

## **Introduction**

Sleep is not a luxury - it is a biological necessity. Poor sleep affects every system in your body, from immune function and metabolism to mental health and cognitive performance. Yet one-third of adults do not get adequate sleep.

This workbook uses evidence-based Cognitive Behavioral Therapy for Insomnia (CBT-I) - the first-line treatment recommended by medical organizations - combined with comprehensive sleep hygiene optimization.

### **Who This Book Is For**

- People struggling to fall asleep or stay asleep
- Anyone with chronic insomnia or poor sleep quality
- Those wanting to optimize sleep for better health
- People reducing or transitioning off sleep medications
- Shift workers, new parents, or those with disrupted schedules

# Chapter 1: Understanding Sleep Science

## The Two-Process Model of Sleep

Sleep is regulated by two systems working together:

### Process S: Sleep Pressure (Homeostatic)

The longer you are awake, the stronger your drive to sleep. Adenosine accumulates in the brain during waking hours, creating 'sleep pressure.' Caffeine blocks adenosine receptors, which is why it keeps you awake.

### Process C: Circadian Rhythm

Your internal 24-hour clock, controlled by the suprachiasmatic nucleus (SCN) in the brain. Light exposure is the primary signal that sets this clock. Melatonin release begins in the evening as light decreases.

## Sleep Architecture

### Sleep Stages

- Stage 1 (N1): Light sleep, transition stage (5% of night)
- Stage 2 (N2): True sleep onset, memory consolidation (45%)
- Stage 3 (N3): Deep/slow-wave sleep, physical restoration (25%)
- REM Sleep: Dreaming, emotional processing, learning (25%)

One complete sleep cycle takes 90-110 minutes. You need 4-6 cycles per night.

## Consequences of Poor Sleep

### Short-Term (1-3 nights)

- Impaired concentration and memory
- Irritability and mood changes
- Increased appetite and cravings
- Reduced immune function

### Long-Term (Chronic)

- Increased risk of obesity and diabetes
- Cardiovascular disease
- Depression and anxiety
- Cognitive decline and dementia risk
- Weakened immune system
- Hormonal imbalances

## Common Causes of Insomnia

- Hyperarousal: Racing mind, inability to 'turn off'
- Poor sleep habits: Irregular schedule, screen use
- Anxiety and depression

- Medical conditions: Pain, sleep apnea, restless legs
- Medications and substances (caffeine, alcohol)
- Environmental factors (noise, light, temperature)
- Conditioned arousal: Associating bed with wakefulness

## Chapter 2: Sleep Assessment & Baseline

### Insomnia Severity Index (ISI)

Rate each item 0-4 (0=none, 1=mild, 2=moderate, 3=severe, 4=very severe)

Difficulty falling asleep: \_\_\_\_/4

Difficulty staying asleep: \_\_\_\_/4

Problem waking too early: \_\_\_\_/4

Satisfaction with current sleep pattern: \_\_\_\_/4

How noticeable is your sleep problem to others: \_\_\_\_/4

How worried are you about your sleep: \_\_\_\_/4

How much does poor sleep interfere with daily functioning: \_\_\_\_/4

Total ISI Score: \_\_\_\_/28

### Scoring

- 0-7: No clinically significant insomnia
- 8-14: Subthreshold insomnia
- 15-21: Clinical insomnia (moderate severity)
- 22-28: Clinical insomnia (severe)

### Sleep Environment Assessment

Rate each factor:

Room darkness (1=bright, 10=pitch dark): \_\_\_\_

Room temperature (ideal 60-67F): \_\_\_\_ degrees

Noise level (1=loud, 10=silent): \_\_\_\_

Mattress comfort (1-10): \_\_\_\_

Pillow comfort (1-10): \_\_\_\_

Partner disruption (1=major, 10=none): \_\_\_\_

Screen use before bed (minutes): \_\_\_\_

Caffeine cutoff time: \_\_\_\_

Last meal before bed (hours): \_\_\_\_

## Chapter 3: CBT-I Techniques

CBT-I is the gold standard treatment for chronic insomnia, recommended over medication by medical organizations worldwide. It addresses the root causes of insomnia rather than just masking symptoms.

### Technique 1: Sleep Restriction

Counterintuitively, spending less time in bed improves sleep quality.

- Step 1: Calculate your average sleep time from diary (e.g., 5.5 hours)
- Step 2: Set your time in bed to that amount (minimum 5 hours)
- Step 3: Choose a fixed wake time (e.g., 6:30 AM)
- Step 4: Calculate bedtime (wake time minus sleep window)
- Step 5: When sleep efficiency reaches 85%+, add 15 minutes

Sleep Efficiency = (Total Sleep Time / Time in Bed) x 100

### My Sleep Restriction Plan

Current average sleep time: \_\_\_\_ hours

Initial sleep window: \_\_\_\_ hours

Fixed wake time: \_\_\_\_:\_\_\_\_ AM

Initial bedtime: \_\_\_\_:\_\_\_\_ PM

### Technique 2: Stimulus Control

Break the association between bed/bedroom and wakefulness:

- Go to bed ONLY when sleepy (not just tired)
- Use the bed only for sleep and intimacy
- If awake for 15-20 minutes, get up and do something calm
- Return to bed only when sleepy again
- Wake at the same time every day regardless of sleep
- No napping during the day (or limit to 20 min before 2pm)

### Technique 3: Cognitive Restructuring

Challenge unhelpful thoughts about sleep:

#### Common Sleep Myths to Challenge

- Myth: 'I need exactly 8 hours or I can't function'  
Reality: Sleep needs vary (6-9 hours). Quality matters more than quantity.
- Myth: 'One bad night will ruin my whole week'  
Reality: Your body compensates with deeper sleep the following night.
- Myth: 'I should try harder to fall asleep'  
Reality: Effort is the enemy of sleep. Let go of trying.
- Myth: 'Lying in bed resting is almost as good as sleeping'  
Reality: Lying awake in bed creates conditioned arousal.

## Thought Record Worksheet

Worry #1: \_\_\_\_\_  
Evidence for this thought: \_\_\_\_\_  
Evidence against: \_\_\_\_\_  
More balanced thought: \_\_\_\_\_

Worry #2: \_\_\_\_\_  
Evidence for this thought: \_\_\_\_\_  
Evidence against: \_\_\_\_\_  
More balanced thought: \_\_\_\_\_

Worry #3: \_\_\_\_\_  
Evidence for this thought: \_\_\_\_\_  
Evidence against: \_\_\_\_\_  
More balanced thought: \_\_\_\_\_

## Technique 4: Relaxation Training

### Progressive Muscle Relaxation (PMR)

Tense each muscle group for 5 seconds, then relax for 30 seconds:

- Feet and toes
- Calves
- Thighs
- Buttocks
- Abdomen
- Chest
- Hands and forearms
- Upper arms
- Shoulders
- Neck
- Face (jaw, eyes, forehead)

### 4-7-8 Breathing Technique

- Inhale through nose for 4 counts
- Hold breath for 7 counts
- Exhale through mouth for 8 counts
- Repeat 4 cycles

## Chapter 4: Sleep Diary

Complete this diary every morning for at least 2 weeks to establish patterns.

### Week 1 Sleep Diary

Date: \_\_/\_\_/\_\_ Bedtime: \_\_:\_\_:\_\_ Wake time: \_\_:\_\_:\_\_  
Time to fall asleep (min): \_\_ Night wakings: \_\_

Week 16 Sleep Efficiency: \_\_\_\_% (goal: 85%+)

---

## **Chapter 5: Sleep Hygiene Protocol**

### **The Ideal Evening Routine**

#### **3 Hours Before Bed**

- Finish last meal
- No more caffeine (ideally none after noon)
- Complete any vigorous exercise

#### **2 Hours Before Bed**

- Dim lights throughout the house
- Begin winding down activities
- Avoid intense conversations or work

#### **1 Hour Before Bed**

- All screens OFF (blue light blocks melatonin)
- Take a warm bath or shower (body cooling triggers sleep)
- Relaxation practice: reading, gentle stretching, meditation

#### **30 Minutes Before Bed**

- Prepare bedroom: cool (60-67F), dark, quiet
- Journaling or brain dump (write worries on paper)
- Gentle breathing or progressive muscle relaxation

### **Bedroom Environment Optimization**

- Temperature: 60-67 degrees Fahrenheit (15-19 Celsius)
- Darkness: Blackout curtains, cover all LED lights
- Sound: White noise machine or earplugs if needed
- Remove clutter and work materials from bedroom
- Comfortable mattress and pillows (replace every 7-10 years)
- Reserve bed for sleep and intimacy only

### **Morning Routine for Better Sleep**

- Wake at the same time every day (even weekends)
- Get bright light within 30 minutes of waking
- Move your body (even a short walk)
- Avoid hitting snooze (fragments sleep)

## **Chapter 6: Nutrition, Exercise & Supplements**

### **Foods That Promote Sleep**

- Tart cherry juice (natural melatonin source)
- Kiwi fruit (shown to improve sleep onset)
- Almonds and walnuts (melatonin and magnesium)
- Turkey (tryptophan)
- Chamomile tea (apigenin promotes relaxation)
- Fatty fish (omega-3s and vitamin D)
- Warm milk (tryptophan and psychological comfort)

### **Foods That Disrupt Sleep**

- Caffeine (half-life 5-6 hours, affects sleep even if you fall asleep)
- Alcohol (disrupts REM sleep and causes awakenings)
- Spicy foods (raise body temperature)
- High-sugar foods (blood sugar crashes)
- Heavy meals close to bedtime

### **Exercise and Sleep**

- Regular exercise improves sleep quality significantly
- 30 minutes of moderate exercise most days
- Complete vigorous exercise 3+ hours before bed
- Morning or afternoon exercise is ideal for sleep
- Yoga and stretching in the evening can help relaxation

### **Supplements to Discuss with Your Doctor**

- Magnesium glycinate: 200-400mg before bed (calming)
- Melatonin: 0.5-3mg (for circadian issues, not long-term)
- L-theanine: 200mg (promotes relaxation without drowsiness)
- Glycine: 3g before bed (lowers core body temperature)
- Valerian root: May improve sleep quality
- Ashwagandha: Reduces cortisol, improves sleep

## Chapter 7: Progress Review

### Week 1 Review

Date Range: \_\_/\_\_/\_\_ to \_\_/\_\_/\_\_

Average sleep efficiency this week: \_\_%

---

Average time to fall asleep: \_\_ min

---

Average total sleep time: \_\_ hours

---

Number of nights with insomnia: \_\_/7

---

CBT-I techniques practiced:

---

Biggest improvement:

---

Remaining challenges:

---

Adjustment for next week:

---

---

## Week 2 Review

Date Range: \_\_/\_\_/\_\_ to \_\_/\_\_/\_\_

Average sleep efficiency this week: \_\_%

---

Average time to fall asleep: \_\_ min

---

Average total sleep time: \_\_ hours

---

Number of nights with insomnia: \_\_/7

---

CBT-I techniques practiced:

---

Biggest improvement:

---

Remaining challenges:

---

Adjustment for next week:

---

---

### Week 3 Review

Date Range: \_\_/\_\_/\_\_ to \_\_/\_\_/\_\_

Average sleep efficiency this week: \_\_%

---

Average time to fall asleep: \_\_ min

---

Average total sleep time: \_\_ hours

---

Number of nights with insomnia: \_\_/7

---

CBT-I techniques practiced:

---

Biggest improvement:

---

Remaining challenges:

---

Adjustment for next week:

---

---

## Week 4 Review

Date Range: \_\_/\_\_/\_\_ to \_\_/\_\_/\_\_

Average sleep efficiency this week: \_\_%

---

Average time to fall asleep: \_\_ min

---

Average total sleep time: \_\_ hours

---

Number of nights with insomnia: \_\_/7

---

CBT-I techniques practiced:

---

Biggest improvement:

---

Remaining challenges:

---

Adjustment for next week:

---

---

## Week 5 Review

Date Range: \_\_/\_\_/\_\_ to \_\_/\_\_/\_\_

Average sleep efficiency this week: \_\_%

---

Average time to fall asleep: \_\_ min

---

Average total sleep time: \_\_ hours

---

Number of nights with insomnia: \_\_/7

---

CBT-I techniques practiced:

---

Biggest improvement:

---

Remaining challenges:

---

Adjustment for next week:

---

---

## Frequently Asked Questions

### **Q: How long does CBT-I take to work?**

Most people see improvement within 2-4 weeks. Full benefits are typically achieved in 6-8 weeks. It's normal for things to feel harder before they get better, especially with sleep restriction.

### **Q: Is it normal to feel worse when starting sleep restriction?**

Yes. Initial daytime sleepiness is expected and actually helps build stronger sleep drive. This temporary discomfort leads to better, more consolidated sleep.

### **Q: Should I take melatonin every night?**

Melatonin is best for circadian rhythm issues (jet lag, shift work) rather than general insomnia. Long-term nightly use is not recommended. Discuss with your doctor.

### **Q: Why does alcohol make insomnia worse?**

While alcohol helps you fall asleep initially, it severely disrupts sleep architecture, suppresses REM sleep, and causes middle-of-the-night awakenings as it metabolizes.

### **Q: Can I ever catch up on lost sleep?**

Partially. One or two late mornings can help, but chronic sleep debt cannot be fully repaid by sleeping in on weekends. Consistency is more important than marathon sleep sessions.

### **Q: When should I see a sleep specialist?**

If insomnia persists after 4-6 weeks of CBT-I, or if you suspect sleep apnea (snoring, gasping, daytime sleepiness despite adequate hours), excessive daytime sleepiness, or restless legs.

### **Q: Is napping good or bad?**

For insomnia sufferers, napping typically makes nighttime sleep worse by reducing sleep pressure. If you must nap, keep it under 20 minutes and before 2pm.

### **Q: Does screen time really affect sleep?**

Yes. Blue light from screens suppresses melatonin production by up to 50%. The stimulating content also increases arousal. Stop screens 1+ hour before bed.

### **Q: What if I work shifts?**

Shift workers need modified strategies: blackout curtains for day sleep, strategic light exposure, consistent anchor sleep times, and melatonin timed to your desired sleep window.

### **Q: Can anxiety cause insomnia?**

Absolutely. Anxiety and insomnia form a bidirectional cycle - each worsens the other. CBT-I addresses both by reducing hyperarousal and breaking the anxiety-insomnia connection.

## **Quick-Reference: Sleep Hygiene Checklist**

- ☐ Consistent wake time (same every day)
- ☐ Bright light exposure within 30 min of waking
- ☐ No caffeine after noon
- ☐ Exercise completed (not within 3 hours of bed)
- ☐ Screens off 1 hour before bed
- ☐ Bedroom cool (60-67F), dark, and quiet
- ☐ Relaxation practice before bed
- ☐ In bed only when sleepy
- ☐ No clock-watching during the night

## Notes & Reflections

Use these pages to record your thoughts, observations, and insights as you work through this workbook.

## Notes - Page 1

Date: \_\_\_\_/\_\_\_\_/\_\_\_\_

This image shows a full page of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page, providing a template for handwriting practice or general writing. There are no margins, text, or other markings on the page.

## Notes - Page 2

Date: \_\_\_\_/\_\_\_\_/\_\_\_\_

This image shows a full page of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page, providing a template for handwriting practice. There are no margins, text, or other markings on the page.

## Notes - Page 3

Date: \_\_\_\_/\_\_\_\_/\_\_\_\_

This image shows a single page of white paper with horizontal ruling lines. The lines are evenly spaced and extend across the width of the page. There are no margins, text, or other markings on the paper.
