Table of Contents

1. Understanding Type 2 Diabetes
 2. Your Diabetes Baseline
 3. Blood Sugar Management
 4. Daily Blood Sugar Log
 5. Carb Counting & Meal Planning
 6. Exercise & Lifestyle
 7. Progress Review & A1C Tracking
 8. FAQ & Resources
-

Introduction

A Type 2 diabetes diagnosis can feel overwhelming, but it is a condition that responds remarkably well to lifestyle management. Many people achieve excellent blood sugar control - and even remission - through nutrition, exercise, and consistent self-monitoring.

This workbook provides everything you need to track, manage, and improve your blood sugar control with practical tools and evidence-based strategies.

Chapter 1: Understanding Type 2 Diabetes

What Is Type 2 Diabetes?

In Type 2 diabetes, your body either does not produce enough insulin or your cells have become resistant to insulin's effects. This results in elevated blood glucose (sugar) levels that, over time, can damage blood vessels, nerves, and organs.

Key Terms to Know

- Insulin: Hormone that allows glucose to enter cells for energy
- Insulin resistance: Cells don't respond properly to insulin
- Glucose: Sugar in your blood (from food and liver)
- A1C: Average blood sugar over 2-3 months
- Fasting glucose: Blood sugar after 8+ hours without food
- Postprandial: Blood sugar after eating

Blood Sugar Targets

General Guidelines (discuss with your doctor)

- Fasting (before meals): 80-130 mg/dL
- 2 hours after meal start: Less than 180 mg/dL
- A1C goal: Less than 7% (or as set by your doctor)
- Bedtime: 100-140 mg/dL

Risk Factors for Complications

- Consistently elevated blood sugar
- High blood pressure
- High cholesterol
- Smoking
- Physical inactivity
- Excess weight

Potential Complications (Prevention Is Key)

- Heart disease and stroke
- Nerve damage (neuropathy)
- Kidney disease (nephropathy)
- Eye damage (retinopathy)
- Foot problems and slow healing

These complications are largely preventable with good blood sugar control!

Chapter 2: Your Diabetes Baseline

My Diabetes Profile

Date diagnosed: __/__/__

Most recent A1C: __% Date: __/__/__

A1C goal (from doctor): __%

Fasting glucose average: __ mg/dL

Current weight: __ lbs Goal weight: __ lbs

Blood pressure: __/__ mmHg

Last eye exam: __/__/__

Last foot exam: __/__/__

Current Medications

Medication #1: _____ Dose: _____ Times/day: ____

Medication #2: _____ Dose: _____ Times/day: ____

Medication #3: _____ Dose: _____ Times/day: ____

Medication #4: _____ Dose: _____ Times/day: ____

My Healthcare Team

Primary doctor: _____ Phone: _____

Endocrinologist: _____ Phone: _____

Diabetes educator: _____ Phone: _____

Dietitian: _____ Phone: _____

Eye doctor: _____ Phone: _____

Podiatrist: _____ Phone: _____

Chapter 3: Blood Sugar Management Strategies

The Glucose Equation

Blood sugar is affected by: Food (raises it), Exercise (lowers it), Medication (lowers it), Stress (raises it), Sleep (poor sleep raises it), Illness (raises it).

How to Test Blood Sugar

- Wash hands with warm water (cold hands give low readings)
- Use side of fingertip (less painful)
- Rotate fingers and sites
- Record immediately in your log

When to Test

- Fasting (first thing in morning)
- Before meals
- 2 hours after first bite of meals
- Before bed
- Before and after exercise
- When feeling 'off' (high or low symptoms)

Recognizing Highs and Lows

High Blood Sugar (Hyperglycemia) Signs

- Increased thirst and frequent urination
- Blurred vision
- Fatigue and headache
- Slow healing wounds

Low Blood Sugar (Hypoglycemia) Signs

- Shakiness, sweating, rapid heartbeat
- Dizziness, confusion
- Hunger
- Irritability

Rule of 15 for Low Blood Sugar

- If below 70 mg/dL: Eat 15g fast-acting carbs
- Wait 15 minutes and retest
- If still low, repeat
- Once normal, eat a balanced snack

Chapter 4: Daily Blood Sugar Log

Chapter 5: Carb Counting & Meal Planning

Carbohydrate Basics

Carbohydrates have the biggest impact on blood sugar. Learning to count and manage carbs is the most important dietary skill for diabetes management.

Daily Carb Targets (discuss with your team)

- Conservative: 45-60g per meal, 15-20g per snack
- Moderate: 30-45g per meal, 15g per snack
- Lower carb: 20-30g per meal, 10g per snack

Carb Counting Quick Reference

- 1 slice bread = 15g carbs
- 1/3 cup rice or pasta = 15g carbs
- 1 small fruit = 15g carbs
- 1 cup milk = 12g carbs
- 1/2 cup beans = 15g carbs
- Non-starchy vegetables = 5g per cup
- Meat, fish, cheese, oils = 0g carbs

Best Foods for Blood Sugar Control

Low-Glycemic Foods (choose often)

- Non-starchy vegetables (unlimited)
- Beans and lentils
- Steel-cut oats
- Sweet potatoes (better than white)
- Berries (lower sugar than tropical fruits)
- Nuts and seeds
- Quinoa

The Plate Method

- 1/2 plate: Non-starchy vegetables
- 1/4 plate: Lean protein
- 1/4 plate: Complex carbohydrates
- Add: Healthy fat (olive oil, avocado)

7-Day Diabetes-Friendly Meal Plan

Monday

- Breakfast: 2 eggs + spinach + 1 slice whole grain toast
- Lunch: Grilled chicken salad with olive oil
- Dinner: Salmon + roasted vegetables + 1/2 cup brown rice

Tuesday

- Breakfast: Greek yogurt + berries + 10 almonds
- Lunch: Turkey lettuce wraps + vegetable soup
- Dinner: Lean beef stir-fry with lots of vegetables

Wednesday

- Breakfast: Oatmeal (1/3 cup dry) + walnuts + cinnamon
- Lunch: Lentil soup + side salad
- Dinner: Baked chicken + sweet potato + broccoli

Thursday

- Breakfast: Veggie omelet + avocado
- Lunch: Tuna salad on greens + whole grain crackers
- Dinner: Shrimp + zucchini noodles + marinara

Friday

- Breakfast: Smoothie: protein powder + spinach + berries
- Lunch: Bean and cheese quesadilla (1 tortilla) + salad
- Dinner: Grilled fish + cauliflower mash + asparagus

Saturday

- Breakfast: Cottage cheese + sliced peaches + seeds
- Lunch: Large salad with protein + olive oil dressing
- Dinner: Turkey meatballs + spaghetti squash

Sunday

- Breakfast: Egg muffins (made ahead) + fruit
- Lunch: Leftovers or soup
- Dinner: Slow cooker chicken thighs + root vegetables

Chapter 6: Exercise & Lifestyle

Exercise and Blood Sugar

Exercise is powerful medicine for Type 2 diabetes. It improves insulin sensitivity for up to 48 hours after activity.

Exercise Guidelines

- 150+ minutes moderate aerobic activity per week
- 2-3 sessions of resistance/strength training
- Break up sitting every 30 minutes
- 10-15 minute walk after meals (very effective)

Safety Tips

- Check blood sugar before exercise
- If under 100: Have a small snack first
- If over 250: Check ketones, delay exercise if positive
- Carry fast-acting glucose during activity
- Stay hydrated

Stress Management

Stress hormones directly raise blood sugar. Managing stress is essential for diabetes control.

- Daily relaxation practice (deep breathing, meditation)
- Regular physical activity
- Adequate sleep (7-9 hours)
- Social connection and support
- Time management and saying no

Chapter 7: Progress Review & A1C Tracking

A1C Record

Track your A1C results over time:

Frequently Asked Questions

Q: Can Type 2 diabetes be reversed?

Many people achieve remission (normal blood sugar without medication) through significant lifestyle changes, especially weight loss and low-carb eating. Discuss realistic goals with your doctor.

Q: How often should I check my blood sugar?

This depends on your treatment plan. Those on insulin may test 4+ times daily. Others may test fasting and after meals a few times per week. Follow your doctor's guidance.

Q: Are all carbs bad?

No. Focus on quality: whole grains, legumes, fruits, and vegetables are healthful. Minimize refined carbs, sugar, and processed foods. Portion control matters most.

Q: Can I still eat fruit?

Yes! Choose whole fruits over juice. Berries, apples, and citrus have lower glycemic impact. Pair fruit with protein or fat to slow glucose absorption.

Q: What about artificial sweeteners?

They don't raise blood sugar directly, but may affect gut bacteria and appetite. Use in moderation. Water, unsweetened tea, and sparkling water are best.

Q: Should I follow a keto diet?

Very low-carb diets can significantly improve blood sugar but must be medically supervised, especially if on insulin or sulfonylureas (risk of hypoglycemia). Sustainability matters.

Q: How does sleep affect blood sugar?

Poor sleep increases insulin resistance, raises cortisol, and makes blood sugar harder to control. Prioritize 7-9 hours of quality sleep.

Q: Can stress raise my blood sugar?

Yes, significantly. Stress hormones (cortisol, adrenaline) tell the liver to release glucose. Chronic stress can raise A1C by 0.5-1%.

Q: When should I call my doctor?

Contact your doctor if blood sugar is consistently over 250, under 70, if you feel sick, or if you notice signs of complications (numbness, vision changes, slow healing).

Q: Will I need insulin eventually?

Not necessarily. Many people manage Type 2 with lifestyle and oral medications long-term. Needing insulin isn't a failure - it means your body needs additional support.

Quick-Reference: Daily Diabetes Checklist

- ☐ Checked blood sugar as recommended
- ☐ Took all medications on time
- ☐ Counted/managed carb intake
- ☐ Ate balanced meals with vegetables
- ☐ Moved body for 30+ minutes
- ☐ Walked after at least one meal
- ☐ Drank adequate water
- ☐ Checked feet for issues
- ☐ Managed stress levels
- ☐ Recorded readings in log

Notes & Reflections

Use these pages to record your thoughts, observations, and insights as you work through this workbook.

Notes - Page 1

Date: ____/____/____

This image shows a single sheet of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Notes - Page 2

Date: ____/____/____

This image shows a full page of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page, providing a template for handwriting practice or general writing. There are no margins, text, or other markings on the page.
