Introduction

Migraines are not 'just headaches.' They are a complex neurological condition affecting over 1 billion people worldwide. This workbook helps you identify your personal triggers, track attack patterns, develop rescue protocols, and work toward fewer, less severe migraine days.

Chapter 1: Understanding Migraines

What Is a Migraine?

A migraine is a neurological event involving changes in brain chemistry, blood flow, and nerve signaling. It typically involves moderate-severe headache plus other symptoms.

Migraine Phases

- Prodrome (hours-days before): Mood changes, food cravings, neck stiffness, fatigue
- Aura (20-60 min before, 25% of sufferers): Visual disturbances, tingling, speech difficulty
- Attack (4-72 hours): Throbbing head pain, nausea, light/sound sensitivity
- Postdrome (hours-days after): 'Migraine hangover' - fatigue, brain fog, weakness

Types of Migraines

- Migraine without aura (most common, ~75%)
- Migraine with aura (visual/sensory warning signs)
- Chronic migraine (15+ headache days/month)
- Menstrual migraine (linked to hormone changes)
- Vestibular migraine (dizziness and balance issues)

Common Triggers

- Hormonal changes (menstruation, ovulation)
- Stress (or stress letdown - weekend/vacation)
- Sleep changes (too much, too little, or irregular)
- Weather and barometric pressure changes
- Dietary triggers (alcohol, aged cheese, MSG, nitrates)
- Dehydration and skipped meals
- Sensory overload (bright lights, strong smells, loud noise)
- Neck tension and poor posture

Chapter 5: Attack Protocol & Rescue Plan

My Migraine Rescue Protocol

Complete when well. Keep copies at home, work, and in bag.

At First Warning Signs (prodrome/aura)

- Take acute medication: _____ (within ____ minutes)
- Move to quiet, dark environment if possible
- Apply cold pack to: _____
- Other: _____

During Attack

- Medication #2 (if first doesn't work in ____ min): _____
- Position: _____
- Tools: []Ice pack []Eye mask []Earplugs []Peppermint oil
- Do NOT: _____

Emergency - Seek Medical Care If:

- Worst headache of your life (sudden onset)
- Fever with stiff neck
- Confusion, weakness, or speech difficulty
- Pain after head injury
- Pain unresponsive to all treatments for 72+ hours

Chapter 6: Prevention Strategies

Lifestyle Prevention

- Regular sleep schedule (same time every day including weekends)
- Never skip meals (stable blood sugar)
- Stay hydrated (aim for clear urine)
- Regular moderate exercise (avoid sudden intense exertion)
- Stress management (consistent practices, not just during stress)
- Limit screen time and take regular breaks
- Good posture and ergonomic workspace

Supplements (discuss with your doctor)

- Magnesium: 400-600mg daily (best evidence for prevention)
- Riboflavin (B2): 400mg daily
- CoQ10: 100mg three times daily
- Feverfew: Herbal, modest evidence
- Butterbur: Effective but quality concerns (PA-free only)

Frequently Asked Questions

Q: Why are my migraines getting more frequent?

Increased frequency can result from medication overuse, stress changes, hormonal shifts, new triggers, or progression to chronic migraine. Track patterns and discuss with your neurologist.

Q: What is medication overuse headache?

Using acute migraine medications more than 10-15 days per month can paradoxically cause more headaches. If you need medication this often, discuss preventive options with your doctor.

Q: Can diet really help migraines?

For some people, yes. Common dietary triggers include alcohol, aged cheese, processed meats, and MSG. An elimination approach can identify your personal triggers.

Q: Should I see a neurologist?

Consider a neurologist or headache specialist if: migraines are increasing, current treatment isn't working, you need acute medication 10+ days/month, or you have unusual symptoms.

Q: Are migraines dangerous?

While extremely painful and disabling, most migraines are not dangerous. However, always seek emergency care for sudden worst-ever headache, or migraine with neurological symptoms.

Q: Can exercise trigger migraines?

It can for some people, especially sudden intense exercise. Start gradually, warm up properly, stay hydrated, and exercise regularly rather than sporadically.

Q: What about caffeine?

Caffeine is complex for migraines - it can both trigger and treat them. Consistent moderate intake (same amount daily) is better than irregular use. Withdrawal is a common trigger.

Q: Do migraines get better with age?

Many people experience improvement after age 50-60, especially women after menopause. However, this varies significantly between individuals.

Quick-Reference: Daily Migraine Prevention Checklist

- ☐ Woke at consistent time
- ☐ Ate regular meals (no skipping)
- ☐ Drank adequate water (8+ glasses)
- ☐ Took preventive supplements/medication
- ☐ Managed stress proactively
- ☐ Moved body gently
- ☐ Limited screen time / took breaks
- ☐ Avoided known triggers
- ☐ Prepared for sleep at consistent time
