Introduction

Polycystic Ovary Syndrome (PCOS) affects 1 in 10 women of reproductive age, yet many go undiagnosed for years. This workbook provides comprehensive tools for managing PCOS through nutrition, exercise, and lifestyle modifications that address the root causes: insulin resistance and inflammation.

Chapter 1: Understanding PCOS

What Is PCOS?

PCOS is a hormonal and metabolic condition characterized by excess androgen production, insulin resistance, and often (but not always) ovarian cysts. It affects hormones, metabolism, fertility, and long-term health.

Diagnostic Criteria (Rotterdam - need 2 of 3)

- Irregular or absent periods (oligo/anovulation)
- High androgens (clinical signs or blood tests)
- Polycystic ovaries on ultrasound

PCOS Phenotypes (Types)

Type A: Classic (most common)

- All three criteria present
- Highest metabolic risk

Type B: Classic without PCO

- Irregular periods + high androgens

Type C: Ovulatory

- High androgens + polycystic ovaries but regular periods

Type D: Non-hyperandrogenic

- Irregular periods + polycystic ovaries but normal androgens

Root Causes

Insulin Resistance (70-80% of PCOS)

High insulin drives the ovaries to produce excess testosterone. Managing insulin is the key to managing PCOS for most women.

Chronic Inflammation

Low-grade inflammation stimulates androgen production and worsens insulin resistance, creating a vicious cycle.

Adrenal PCOS

About 20-30% of PCOS is driven by adrenal androgens (DHEA-S) rather than ovarian. Stress management is key for this type.

Chapter 2: Your PCOS Assessment

My PCOS Profile

Diagnosis date: __/__/____

PCOS type (if known): ____

BMI: ____ Waist circumference: ____ inches

Menstrual cycle: ☐ Regular ☐ Irregular ☐ Absent

Average cycle length: ____ days

Trying to conceive: ☐ Yes ☐ No ☐ Future

Symptom Checklist

- ☐ Irregular/absent periods Severity (1-10): ____
- ☐ Excess facial hair (hirsutism) Severity (1-10): ____
- ☐ Acne (jawline, chin, back) Severity (1-10): ____
- ☐ Hair thinning/loss on head Severity (1-10): ____
- ☐ Weight gain (especially midsection) Severity (1-10): ____
- ☐ Difficulty losing weight Severity (1-10): ____
- ☐ Dark skin patches (acanthosis nigricans) Severity (1-10): ____
- ☐ Skin tags Severity (1-10): ____
- ☐ Sugar/carb cravings Severity (1-10): ____
- ☐ Fatigue after meals Severity (1-10): ____
- ☐ Mood swings/anxiety/depression Severity (1-10): ____
- ☐ Fertility struggles Severity (1-10): ____

Lab Values to Track

Testosterone (total): ____ Date: __/__/____

Free testosterone: ____

DHEA-S: ____

Fasting insulin: ____

Fasting glucose: ____

HOMA-IR: ____

AMH: ____

LH:FSH ratio: ____

Vitamin D: ____

A1C: ____

Chapter 3: Nutrition for PCOS

The PCOS Diet Principles

The goal: Lower insulin, reduce inflammation, support hormone balance.

1. Blood Sugar Balance (Most Important)

- Never eat carbs alone - always pair with protein/fat
- Choose low-glycemic carbs (vegetables, legumes, whole grains)
- Eat protein at every meal (palm-sized portion)
- Don't skip meals (blood sugar crashes spike insulin)
- Eat within 1 hour of waking

2. Anti-Inflammatory Focus

- Omega-3 rich foods daily (fatty fish, walnuts, flax)
- Colorful vegetables and berries
- Turmeric, ginger, green tea
- Minimize processed foods, sugar, and seed oils

3. Gut Health Support

- Fermented foods daily (sauerkraut, kimchi)
- High fiber intake (30g+ daily)
- Prebiotic foods (garlic, onion, asparagus)

7-Day PCOS Meal Plan

Monday

- Breakfast: Eggs + avocado + spinach (no toast)
- Lunch: Large salad with salmon and olive oil
- Dinner: Chicken thighs with roasted vegetables

Tuesday

- Breakfast: Protein smoothie with berries and flax
- Lunch: Turkey and vegetable soup with lentils
- Dinner: Baked fish with sweet potato and broccoli

Wednesday

- Breakfast: Greek yogurt + cinnamon + walnuts + seeds
- Lunch: Grain bowl: quinoa, chickpeas, vegetables
- Dinner: Grass-fed beef stir-fry with cauliflower rice

Thursday

- Breakfast: Egg muffins with vegetables
- Lunch: Leftover stir-fry over greens
- Dinner: Salmon with asparagus and quinoa

Friday

- Breakfast: Chia pudding with berries and almond butter
- Lunch: Mediterranean salad with olive oil
- Dinner: Chicken curry with vegetables (no rice or cauliflower rice)

Saturday

- Breakfast: Sweet potato hash with eggs
- Lunch: Lentil soup with side salad
- Dinner: Grilled fish with roasted Mediterranean vegetables

Sunday

- Breakfast: Protein pancakes (almond flour) with berries
- Lunch: Bone broth soup with vegetables
- Dinner: Slow cooker chicken with root vegetables

Chapter 4: Cycle & Symptom Tracker

Chapter 5: Exercise & Lifestyle

Best Exercise for PCOS

Exercise improves insulin sensitivity - the core issue in PCOS.

Strength Training (MOST IMPORTANT)

- 2-4x per week
- Builds muscle which improves insulin sensitivity 24/7
- Compound movements: squats, deadlifts, presses, rows
- Progressive overload (gradually increase weight)

Moderate Cardio

- Walking: 30+ minutes daily
- Swimming, cycling, dance
- AVOID excessive cardio (raises cortisol, can worsen PCOS)

Yoga and Stress-Reducing Movement

- Yoga: Proven to improve PCOS symptoms
- Helps with stress and cortisol management

Stress Management for PCOS

Stress raises cortisol which raises insulin which worsens PCOS.

- Daily meditation or breathwork (10+ minutes)
- Adequate sleep (7-9 hours, consistent schedule)
- Nature exposure
- Boundaries and saying no
- Joyful activities and social connection

Chapter 6: Supplements & Medications

Evidence-Based Supplements for PCOS

- Inositol (myo-inositol + D-chiro-inositol, 40:1 ratio): Improves insulin sensitivity, ovulation, and egg quality. Dose: 4g myo + 100mg D-chiro daily
- Vitamin D: Most PCOS women are deficient. Test and supplement to optimal (40-60 ng/mL)
- Omega-3 fish oil: Reduces inflammation and androgens. 2-3g daily
- Magnesium: Improves insulin resistance, sleep, anxiety. 200-400mg glycinate
- Zinc: Supports ovulation and reduces acne/hair growth. 30mg daily
- Berberine: Natural insulin sensitizer (similar to metformin). 500mg 2-3x daily
- NAC (N-acetyl cysteine): Antioxidant, may improve ovulation. 600mg 2-3x daily

Common PCOS Medications

- Metformin: Insulin sensitizer (discuss with doctor)
- Spironolactone: Anti-androgen for acne/hirsutism
- Birth control: Manages periods and androgens (doesn't treat root cause)
- Letrozole/Clomid: For ovulation induction if trying to conceive

Chapter 7: Progress Review

Week 1 Review

Date Range: __/__/____ to __/__/____

Cycle regularity this month:

Symptom severity (1-10):

Blood sugar stability (1-10):

Exercise completed:

Nutrition adherence (1-10):

Stress level (1-10):

Supplements taken consistently:

Next step/goal:

Week 2 Review

Date Range: __/__/__ to __/__/__

Cycle regularity this month:

Symptom severity (1-10):

Blood sugar stability (1-10):

Exercise completed:

Nutrition adherence (1-10):

Stress level (1-10):

Supplements taken consistently:

Next step/goal:

Week 3 Review

Date Range: __/__/__ to __/__/__

Cycle regularity this month:

Symptom severity (1-10):

Blood sugar stability (1-10):

Exercise completed:

Nutrition adherence (1-10):

Stress level (1-10):

Supplements taken consistently:

Next step/goal:

Week 4 Review

Date Range: __/__/____ to __/__/____

Cycle regularity this month:

Symptom severity (1-10):

Blood sugar stability (1-10):

Exercise completed:

Nutrition adherence (1-10):

Stress level (1-10):

Supplements taken consistently:

Next step/goal:

Week 5 Review

Date Range: __/__/__ to __/__/__

Cycle regularity this month:

Symptom severity (1-10):

Blood sugar stability (1-10):

Exercise completed:

Nutrition adherence (1-10):

Stress level (1-10):

Supplements taken consistently:

Next step/goal:

Frequently Asked Questions

Q: Can PCOS be cured?

PCOS is a lifelong condition, but symptoms can be managed extremely well through lifestyle. Many women achieve regular ovulation, clear skin, and healthy weight through diet and exercise alone.

Q: Can I get pregnant with PCOS?

Yes! PCOS is the most common cause of ovulatory infertility, but it is also the most treatable. Lifestyle changes, supplements (inositol), and medical interventions can help most women conceive.

Q: Will losing weight cure my PCOS?

Weight loss can dramatically improve symptoms (even 5-10% body weight), but PCOS is not caused by weight. Lean PCOS exists. Focus on insulin sensitivity and inflammation regardless of weight.

Q: Is keto good for PCOS?

Low-carb approaches can help insulin resistance, but very strict keto can raise cortisol and stress the body. Moderate low-carb (under 100g carbs) with adequate fiber is often the best approach.

Q: Why is my hair falling out?

PCOS-related hair loss is usually from excess androgens. It can improve with anti-androgen treatment, inositol, zinc, and addressing the root insulin resistance. Be patient - hair cycles are slow.

Q: Does PCOS get worse with age?

Without management, metabolic risks increase with age. However, many women find symptoms actually improve in their 30s-40s, especially with consistent lifestyle management.

Q: Should I avoid dairy with PCOS?

Dairy can spike insulin and may worsen acne for some women with PCOS. Try eliminating it for 3 months and observe. If tolerated, fermented dairy (yogurt) is better than milk.

Q: How long until supplements help?

Most PCOS supplements take 3-6 months to show full effects (the time for a full follicular cycle). Be consistent and patient. Inositol often shows results in 2-3 months.

Quick-Reference: Daily PCOS Management Checklist

- ☐ Ate protein at every meal
- ☐ Paired carbs with protein/fat (never alone)
- ☐ Included anti-inflammatory foods
- ☐ Exercised (strength or walking)
- ☐ Managed stress (breathing, meditation)
- ☐ Took supplements consistently
- ☐ Tracked cycle/symptoms
- ☐ Got 7-9 hours of sleep
- ☐ Drank spearmint tea (if using for androgens)

Notes & Reflections

Use these pages to record your thoughts, observations, and insights as you work through this workbook.
