Introduction

The ketogenic diet shifts your body from burning glucose to burning fat for fuel. When done correctly, it can support weight loss, stable energy, mental clarity, and improved metabolic markers. This guide provides everything you need to start keto safely and sustainably.

Chapter 1: Understanding Keto

What Is Nutritional Ketosis?

Ketosis is a metabolic state where your body primarily uses fat (converted to ketones) for energy instead of glucose from carbohydrates. This happens when carb intake is low enough (typically under 20-50g net carbs daily).

Standard Keto Macros

- Fat: 70-75% of calories
- Protein: 20-25% of calories
- Net Carbs: 5-10% of calories (20-50g)

Benefits of Keto

- Weight loss (especially body fat)
- Stable energy (no crashes)
- Reduced hunger and cravings
- Mental clarity and focus
- Improved blood sugar and insulin
- Reduced inflammation
- Better triglycerides and HDL cholesterol

The Keto Flu (and How to Avoid It)

During the transition period (days 2-7), you may experience:

- Fatigue and brain fog
- Headaches
- Irritability
- Muscle cramps
- Nausea

Prevention:

- Electrolytes: Sodium (5-7g), Potassium (3-4g), Magnesium (300-400mg)
- Drink plenty of water (dehydration is common)
- Don't restrict calories initially - eat until full
- Rest more during adaptation (1-2 weeks)

Chapter 6: Exercise & Lifestyle on Keto

Exercise During Keto Adaptation (Weeks 1-4)

- Reduce intensity by 30-50% during first 2-3 weeks
- Walking and yoga are excellent choices
- Performance will temporarily decrease then improve
- Stay hydrated and maintain electrolytes

Exercise After Adaptation (Weeks 4+)

- Strength training: Excellent on keto (maintain/build muscle)
- Moderate cardio: Well-fueled by fat burning
- High-intensity: May benefit from targeted carbs around workouts
- Endurance: Keto-adapted athletes often excel at long-duration

Electrolyte Management

Keto increases water and electrolyte loss. Supplement daily:

- Sodium: 5-7g (add salt generously, drink broth)
- Potassium: 3,000-4,000mg (avocado, spinach, supplement)
- Magnesium: 300-400mg (supplement glycinate or citrate)

Frequently Asked Questions

Q: How long until I'm in ketosis?

Most people enter ketosis within 2-4 days of keeping net carbs under 20g. Full fat-adaptation (optimal performance) takes 4-8 weeks.

Q: How do I know if I'm in ketosis?

Signs: Decreased appetite, metallic taste, increased thirst/urination, improved mental clarity. You can test with urine strips (less accurate) or blood ketone meters (most accurate).

Q: Is keto safe long-term?

For most healthy adults, yes. However, those with kidney disease, pancreatitis, liver conditions, or type 1 diabetes should not do keto without medical supervision.

Q: Can I have alcohol on keto?

Spirits (vodka, whiskey, gin) with zero-carb mixers are technically keto. Wine in moderation (5g carbs per glass). Beer is generally too high-carb. Note: alcohol tolerance decreases significantly on keto.

Q: Why am I not losing weight on keto?

Common reasons: Eating too many calories, too much protein (gluconeogenesis), hidden carbs, not tracking accurately, stress/sleep issues, or body recomposition (gaining muscle).

Q: What about cholesterol on keto?

LDL may temporarily rise in some people. Focus on particle size (large fluffy is benign), triglycerides (should drop significantly), HDL (should rise), and overall ratios. Discuss with your doctor.

Q: Can I do keto as a vegetarian?

Yes, though more challenging. Emphasize eggs, cheese, nuts, seeds, avocados, coconut products, and low-carb vegetables. Protein may require careful planning.

Q: How do I handle social situations?

Choose meat and vegetable options at restaurants. Bring keto-friendly dishes to gatherings. Most meals can be adapted by removing the starch component.

Q: What is a 'keto stall' and how do I break it?

A stall is 3+ weeks without weight change. Try: a fat fast, reducing dairy, intermittent fasting, changing exercise routine, reducing artificial sweeteners, or just being patient.

Q: Should I cycle in and out of keto?

Some people benefit from cyclical keto (5 days keto, 1-2 days higher carb). This can help thyroid function and workout performance. Experiment after full adaptation.

Quick-Reference: Daily Keto Checklist

- ☐ Net carbs under 20g
- ☐ Adequate protein (palm-size at each meal)
- ☐ Healthy fats with each meal
- ☐ Electrolytes: sodium, potassium, magnesium
- ☐ Drank 80+ oz water
- ☐ Ate vegetables (low-carb)
- ☐ Tracked macros
- ☐ Moved body
