Introduction

Pregnancy is a time when nutrition matters more than ever - you're building a human! This guide provides trimester-by-trimester nutrition, safe exercise guidelines, supplement information, and wellness tracking to support you and your baby through all 40 weeks.

Note: Every pregnancy is unique. This guide provides general evidence-based information. Always follow your healthcare provider's specific recommendations.

Chapter 1: Understanding Pregnancy Nutrition

Caloric Needs by Trimester

- First trimester: No extra calories needed (focus on quality)
- Second trimester: +340 calories per day
- Third trimester: +450 calories per day

These are averages - your provider will guide you based on starting weight.

Key Nutrients for Pregnancy

Folate (600mcg DFE daily)

Critical for neural tube development. Needed before and during early pregnancy.

- Sources: Leafy greens, legumes, fortified foods
- Supplement: Prenatal vitamin with methylfolate preferred

Iron (27mg daily)

Blood volume increases 50% during pregnancy. Iron prevents anemia.

- Sources: Red meat, lentils, spinach, fortified cereals
- Take with vitamin C for better absorption

Calcium (1000mg daily)

Builds baby's bones and teeth. If you don't consume enough, baby takes from your bones.

- Sources: Dairy, fortified plant milk, leafy greens, sardines

DHA Omega-3 (300mg daily)

Critical for baby's brain and eye development.

- Sources: Fatty fish (2-3 servings/week), DHA supplement

Choline (450mg daily)

Brain development and prevents neural tube defects. Often missing from prenats.

- Sources: Eggs (1 egg = 150mg), liver, meat, fish

Protein (75-100g daily)

Builds baby's tissues, placenta, and supports blood volume.

- Sources: Meat, fish, eggs, dairy, legumes

Foods to Avoid During Pregnancy

- Raw or undercooked meat, fish, eggs
- High-mercury fish (shark, swordfish, king mackerel, tilefish)
- Unpasteurized dairy and juice
- Deli meats (unless heated until steaming)
- Raw sprouts
- Alcohol (no safe amount during pregnancy)
- Excessive caffeine (limit to 200mg/day = 1 cup coffee)

Chapter 2: First Trimester (Weeks 1-13)

What's Happening

All major organs and body systems are forming. This is the most critical time for nutrition quality (even though you may not feel like eating).

Managing Nausea

- Eat small, frequent meals (every 2-3 hours)
- Keep crackers by bedside for morning sickness
- Ginger: Tea, candies, or supplement (shown to reduce nausea)
- Vitamin B6: 25mg 3x daily (discuss with provider)
- Cold foods may be tolerated better than hot
- Avoid strong smells and trigger foods
- Stay hydrated (sip throughout the day)

First Trimester Nutrition Priorities

- Folate-rich foods daily
- Adequate hydration despite nausea
- Whatever you can keep down is okay
- Prenatal vitamin (try at night if morning sickness)
- Protein when tolerated (aids nausea)

Chapter 3: Second Trimester (Weeks 14-27)

What's Happening

Baby is growing rapidly. Energy often returns (the 'honeymoon trimester'). Focus on nutrient-dense foods and increasing intake.

Second Trimester Nutrition Focus

- Increase calories by ~340/day
- Emphasize calcium and vitamin D (baby's bones forming)
- Iron-rich foods (blood volume expanding)
- Protein at every meal
- Fiber for constipation prevention (25-30g daily)
- DHA for brain development

Sample Day - Second Trimester

- Breakfast: Eggs + whole grain toast + fruit + prenatal vitamin
- Snack: Greek yogurt with berries and granola
- Lunch: Salmon salad with leafy greens and olive oil
- Snack: Apple with almond butter
- Dinner: Chicken, sweet potato, steamed broccoli
- Evening: Warm milk with honey, handful of walnuts

Chapter 4: Third Trimester (Weeks 28-40)

What's Happening

Baby is gaining weight rapidly (about 1/2 pound per week). Your body is preparing for labor. Space in stomach decreases - eat smaller, more frequent meals.

Third Trimester Nutrition

- Increase calories by ~450/day over baseline
- Protein: Critical for baby's final growth spurt
- Iron: Prepare for blood loss at delivery
- Vitamin K: Important for blood clotting (leafy greens)
- Dates: 6 per day from week 36 (may ease labor)
- Red raspberry leaf tea: After week 32 (uterine toning)

Managing Common Discomforts

Heartburn

- Eat smaller, more frequent meals
- Avoid lying down after eating
- Skip spicy, fatty, acidic foods if triggering

Constipation

- High fiber foods (30g+ daily)
- Adequate water (10+ cups daily)
- Movement and walking
- Magnesium supplement

Swelling

- Adequate protein (helps with fluid balance)
- Elevate feet when possible
- Reduce sodium if excessive
- Stay hydrated (counterintuitive but helps)

Chapter 5: Exercise During Pregnancy

Benefits of Prenatal Exercise

- Reduces risk of gestational diabetes
- Helps manage healthy weight gain
- Reduces back pain and constipation
- May shorten labor and reduce c-section risk
- Improves mood and sleep
- Faster postpartum recovery

Safe Exercises

- Walking (all trimesters)
- Swimming and water aerobics (joint-friendly)
- Prenatal yoga
- Stationary cycling
- Modified strength training
- Pelvic floor exercises (Kegels)

Exercises to Avoid

- Contact sports or fall risk activities
- Lying flat on back after first trimester
- Hot yoga or hot environments
- Heavy lifting with breath holding
- Jumping, bouncing, or jarring movements
- Exercises that cause pain or dizziness

Stop Exercise and Call Provider If:

- Vaginal bleeding
- Dizziness or faintness
- Chest pain or shortness of breath
- Headache
- Muscle weakness
- Calf pain or swelling
- Regular contractions
- Fluid leaking from vagina

Chapter 6: Supplement & Safety Guide

Essential Prenatal Supplements

- Prenatal multivitamin: Contains folate, iron, DHA, etc.
- DHA/EPA: 300mg DHA minimum (if not in prenatal)
- Vitamin D: 2000-4000 IU (many women are deficient)
- Iron: If anemic (separate from calcium)
- Choline: 450mg (often not in prenataals)
- Magnesium: For leg cramps, constipation, sleep
- Probiotic: Gut health and potentially reduces Group B strep

Frequently Asked Questions

Q: How much weight should I gain?

Depends on starting BMI: Normal weight: 25-35 lbs, Overweight: 15-25 lbs, Underweight: 28-40 lbs, Obese: 11-20 lbs. Your provider will give personalized guidance.

Q: Is caffeine safe?

Up to 200mg/day (about one 12oz coffee) is considered safe. Some providers recommend less. Avoid energy drinks entirely.

Q: Can I eat sushi?

Raw fish carries infection risk during pregnancy. Cooked sushi rolls (shrimp tempura, California roll with imitation crab) are fine. Low-mercury cooked fish is encouraged.

Q: What about food cravings?

Cravings are normal and okay to indulge in moderation. If craving non-food items (ice, dirt, chalk) - this is called pica and may indicate a nutritional deficiency. Tell your provider.

Q: Do I really need a prenatal vitamin?

Yes. It's very difficult to get adequate folate, iron, and DHA from food alone during pregnancy. Think of it as insurance for any nutritional gaps.

Q: Is exercise safe in the third trimester?

Yes, unless your provider says otherwise. Modify as needed - reduce intensity, avoid overheating, stop if anything feels wrong. Walking and swimming are excellent throughout.

Q: What if I can't keep anything down?

Severe nausea/vomiting (hyperemesis gravidarum) affects 1-3% of pregnancies and needs medical treatment. If you cannot keep food/water down for 24 hours, contact your provider.

Q: Can I diet during pregnancy?

Pregnancy is not the time for weight loss diets. Focus on nutrient quality, not restriction. If overweight, your provider may recommend modest calorie awareness without restriction.

Quick-Reference: Daily Pregnancy Nutrition Checklist

- ☐ Took prenatal vitamin
- ☐ Ate protein at every meal
- ☐ Consumed calcium-rich food
- ☐ Ate iron-rich food
- ☐ Had DHA source (fish or supplement)
- ☐ Ate colorful fruits and vegetables
- ☐ Drank 10+ cups of water
- ☐ Had choline source (eggs)
- ☐ Moved body (even just a walk)
